CV SUMMARY

I am an experimental physicist with an international research career at the interface between atomic and condensed matter physics. My research activities are centered on the experimental simulation of quantum many-body physics with ultracold atoms, including superfluid Fermi gases, the strongly correlated phases of the Fermi-Hubbard model, quantum magnetism, artificial graphene, quantum liquid droplets in bosonic mixtures, artificial gauge fields, and gauge theories. After a PhD thesis at Ecole Normale Supérieure in Paris, a postdoctoral stay at ETH Zurich, and a CNRS research scientist position at Institut d'Optique in Bordeaux, I joined ICFO as Group Leader in 2013 and became ICREA professor in 2022. At ICFO, I have established the only experimental research group working on quantum simulation with ultracold quantum gases in Spain, producing in 2015 the first Spanish Bose-Einstein condensate. Since then, I have developed three distinct research lines. First, I have pioneered the field of continuum quantum mixtures with competing interactions, a research line that is well recognized internationally and has led to several high-impact publications (Science, Nature, Phys. Rev. Lett.), invited talks in the major conferences (BEC, DAMOP, ICOLS, ICAP, APS March Meeting), and is currently supported by an ERC Consolidator Grant. Second, I have constructed an experimental apparatus for the investigation of strontium optical lattice systems with single-site and single-atom resolution, which will focus on the quantum simulation of the Bose and Fermi-Hubbard models, and is part of the European Quantum Technologies Flagship program in quantum simulation. Finally, I have very recently started the development of a new research line that aims at investigating gauge theories with programmable arrays of Rydberg atoms. My work is carried out in collaboration with leading theory groups in Catalonia (at ICFO, UPC, and UAB) and worldwide (at Paris, Harvard, Munich, and Trento). My experimental group currently consists of 4 postdocs, 3 PhD students, 1 project engineer, and 6 Master students. In parallel to my experimental research activities, I co-supervise several theory researchers (2 postdocs, 2 PhD students), I teach in Master programs and in international graduate schools, and regularly give talks and labtours for general audiences.
